# ANSWERS TO QUESTIONS

1. (a) Under the time period assumption, an accountant is required to determine the relevance of each business transaction to specific accounting periods.  
(b) An accounting time period of one year in length is referred to as a fiscal year. A fiscal year that extends from January 1 to December 31 is referred to as a calendar year. Accounting periods of less than one year are called interim periods.
2. The two principles that relate to adjusting the accounts are:  
The revenue recognition principle, which states that revenue should be recognized in the accounting period in which the performance obligation is satisfied.  
The expense recognition principle, which states that efforts (expenses) should be matched with accomplishments (revenues).
3. The law firm should recognize the revenue in April. When a company agrees to perform a service for a customer it has a performance obligation. The revenue recognition principle states that revenue should be recognized in the accounting period in which the performance obligation is satisfied which is April in this case.
4. Information presented on an accrual basis is more useful than on a cash basis because it reveals relationships that are likely to be important in predicting future results. To illustrate, under accrual accounting, revenues are recognized when earned so they can be related to the economic environment in which they occur. Trends in revenues are thus more meaningful.
5. Expenses of £4,700 should be deducted from the revenues in April. Under the expense recognition principle efforts (expenses) should be matched with accomplishments (revenues).
6. No, adjusting entries are required by the revenue recognition and expense recognition principles.
7. A trial balance may not contain up-to-date information for financial statements because:
  - (1) Some events are not journalized daily because it is not efficient to do so.
  - (2) The expiration of some costs occurs with the passage of time rather than as a result of daily transactions.
  - (3) Some items may be unrecorded because the transaction data are not yet known.
8. The two categories of adjusting entries are deferrals and accruals. Deferrals consist of prepaid expenses and unearned revenues. Accruals consist of accrued revenues and accrued expenses.
9. In the adjusting entry for a prepaid expense, an expense is debited and an asset is credited.
10. No. Depreciation is the process of allocating the cost of an asset to expense over its useful life in a rational and systematic manner. Depreciation results in the presentation of the book value of the asset, not its fair value.
11. Depreciation expense is an expense account whose normal balance is a debit. This account shows the cost that has expired during the current accounting period. Accumulated depreciation is a contra asset account whose normal balance is a credit. The balance in this account is the depreciation that has been recognized from the date of acquisition to the statement of financial position date.

### Questions Chapter 3 (Continued)

12. Equipment ..... Rs 18,000,000  
 Less: Accumulated Depreciation—Equipment ..... 7,000,000 Rs 11,000,000
13. In the adjusting entry for an unearned revenue, a liability is debited and a revenue is credited.
14. Asset and revenue. An asset would be debited and a revenue would be credited.
15. An expense is debited and a liability is credited in the adjusting entry.
16. Net income was understated NT\$6,000 because prior to adjustment, revenues are understated by NT\$27,000 and expenses are understated by NT\$21,000. The difference in this case is NT\$6,000 (NT\$27,000 – NT\$21,000).
17. The entry is:  
 Jan. 9 Salaries and Wages Payable ..... 2,000  
           Salaries and Wages Expense ..... 4,000  
           Cash..... 6,000
18. (a) Accrued revenues. (d) Accrued expenses or prepaid expenses.  
 (b) Unearned revenues. (e) Prepaid expenses.  
 (c) Accrued expenses. (f) Accrued revenues or unearned revenues.
19. (a) Salaries and Wages Payable. (d) Supplies Expense.  
 (b) Accumulated Depreciation. (e) Service Revenue.  
 (c) Interest Expense. (f) Service Revenue.
20. Disagree. An adjusting entry affects only one statement of financial position account and one income statement account.
21. Financial statements can be prepared from an adjusted trial balance because the balances of all accounts have been adjusted to show the effects of all financial events that have occurred during the accounting period.
- \*22. For Supplies Expense (prepaid expense): expenses are overstated and assets are understated. The adjusting entry is:  
           Assets (Supplies) ..... XX  
           Expenses (Supplies Expense)..... XX
- For Rent Revenue (unearned revenues): revenues are overstated and liabilities are understated. The adjusting entry is:  
           Revenues (Rent Revenue) ..... XX  
           Liabilities (Unearned Rent Revenue)..... XX
- \*23. (a) The primary objective of financial reporting is to provide financial information that is useful to investors and creditors for making decisions about providing capital.  
 (b) The fundamental qualitative characteristics are relevance and faithful representation. The enhancing qualities are comparability, verifiability, timeliness, and understandability.

### Questions Chapter 3 (Continued)

- \*24.** Gross is correct. Consistency means using the same accounting principles and accounting methods from period to period within a company. Without consistency in the application of accounting principles, it is difficult to determine whether a company is better off, worse off, or the same from period to period.
- \*25.** Comparability results when different companies use the same accounting principles. Consistency means using the same accounting principles and methods from year to year within the same company.
- \*26.** The constraint is the cost constraint. The cost constraint allows accounting standard setters to weigh the cost that companies will incur to provide information against the benefit that financial statement users will gain from having the information available.
- \*27.** Accounting relies primarily on two measurement principles. Fair value is sometimes used when market price information is readily available. However, in many situations reliable market price information is not available. In these instances, accounting relies on cost as its basis.
- \*28.** The economic entity assumption states that every economic entity can be separately identified and accounted for. This assumption requires that the activities of the entity be kept separate and distinct from (1) the activities of its owners (the shareholders) and (2) all other economic entities. A shareholder of a company charging personal living costs as expenses of the company is an example of a violation of the economic entity assumption.

# SOLUTIONS TO BRIEF EXERCISES

## BRIEF EXERCISE 3-1

- (a) Prepaid Insurance—to recognize insurance expired during the period.
- (b) Depreciation Expense—to account for the depreciation that has occurred on the asset during the period.
- (c) Unearned Service Revenue—to record revenue earned for services provided.
- (d) Interest Payable—to recognize interest accrued but unpaid on notes payable.

# SOLUTIONS TO EXERCISES

## EXERCISE 3-1

1. True.
2. True.
3. False. Many business transactions affect more than one of these artificial time periods. For example, the purchase of a building affects expenses for many years.
4. True.
5. False. A time period that lasts *less than one year*, such as monthly or quarterly periods, is called an interim period.
6. False. All *calendar* years are *fiscal* years, but not all *fiscal* years are *calendar* years. An accounting time period that is one year in length is referred to as a fiscal year. A fiscal year that starts on January 1 and ends on December 31 is a calendar year.

## EXERCISE 3-2

- (a) Accrual-basis accounting records the transactions that change a company's financial statements in the periods in which the events occur rather than in the periods in which the company receives or pays cash. Information presented on an accrual basis is useful because it reveals relationships that are likely to be important in predicting future results. Conversely, under cash-basis accounting, revenue is recorded only when cash is received, and an expense is recognized only when cash is paid. As a result, the cash basis of accounting often leads to misleading financial statements.
- (b) Politicians might desire a cash-basis accounting system over an accrual-basis system because if an accrual-accounting system is used, it could mean that billions in government liabilities presently unrecorded would have to be reported in the national budget immediately. The recognition of these additional liabilities would make the deficit even worse. This is not what politicians would like to see and be held responsible for.

## EXERCISE 3-2 (Continued)

(c) Dear Official,

It is my understanding, after having taken a beginning course in accounting principles, that the government uses a cash-basis system rather than an accrual-basis accounting system.

I am shocked at such a practice! There must be billions of dollars of liabilities hidden in many contracts that have not been recorded yet for the mere reason that they haven't been paid yet. I realize that the deficit would dramatically increase if we were to implement an accrual system, but in all fairness, we citizens should be given a more accurate picture of what our government is up to.

Sincerely,

CONCERNED STUDENT

**\*EXERCISE 3-19**

- (a) 2 Going concern assumption
- (b) 6 Economic entity assumption
- (c) 3 Monetary unit assumption
- (d) 4 Time period assumption
- (e) 5 Historical cost principle
- (f) 1 Full disclosure principle

**\*EXERCISE 3-20**

- (a) This is a violation of the historical cost principle. The inventory was written up to its fair value when it should have remained at cost.
- (b) This is a violation of the economic entity assumption. The treatment of the transaction treats Jay Rosman and Rosman Co. as one entity when they are two separate entities. Salaries and Wages Expense should not have been debited for the purchase of the truck. The dividends account should have debited instead.

### **\*EXERCISE 3-20 (Continued)**

- (c) This is a violation of the time period assumption. This assumption states that the economic life of a business can be divided into artificial time periods (months, quarters, or a year). By adding two more weeks to the year, Rosman Co. would be misleading financial statement readers. In addition, 2017 results would not be comparable to previous years' results. The company should use a 52 week year.

### **\*EXERCISE 3-21**

1. Comparability
2. Going concern assumption
3. Materiality
4. Full disclosure principle
5. Time period assumption
6. Relevance
7. Historical cost principle
8. Consistency
9. Economic entity assumption
10. Faithful representation
11. Monetary unit assumption
12. Expense recognition principle

### **\*EXERCISE 3-22**

- (a) The primary objective of financial reporting is to provide financial information that is useful to investors and creditors for making decisions about providing capital. Since Net Nanny's shares appear to be actively traded, investors must be capable of using the information made available by Net Nanny to make decisions about the company.
- (b) The investors must feel as if the company will show earnings in the future. They must recognize that information relevant to their investment choice is indicated by more than Net Nanny's net income.
- (c) The change from Canadian dollars to U.S. dollars for reporting purposes should make Net Nanny more comparable with companies traded on U.S. stock exchanges.

### **\*EXERCISE 3-23**

- (a) **Accounting information is the compilation and presentation of financial information for a company. It provides information in the form of financial statements and additional disclosures that is useful for decision making.**

**The accounting rules and practices that have substantial authoritative support and are recognized as a general guide for financial reporting purposes are referred to as international financial reporting standards (IFRS). The biotechnology company that employs Ana will follow IFRS to report its assets, liabilities, equity, revenues, and expenses as it prepares financial statements.**

- (b) **Ana is correct in her understanding that the low success rate for new biotech products will be a cause of concern for investors. Her suggestion that detailed scientific findings be reported to prospective investors might offset some of their concerns but it probably won't conform to the qualitative characteristics of accounting information.**

**These characteristics consist of relevance, faithful representation, comparability, and consistency, verifiability, timeliness, and understandability. They apply to accounting information rather than the scientific findings that Ana wants to include.**

### PROBLEM 3-3A (Continued)

(c) (1)  $I = P \times R \times T$

$$€150 = €5,000 \times R \times 1/2$$

$$€150 = €2,500R$$

$$R = \frac{€150}{€2,500}$$

$$R = 6\%$$

- (2) Salaries and Wages Expense, €11,300 less Salaries and Wages Payable 12/31/17, €1,300 = €10,000. Total payments, €14,500 – €10,000 = €4,500 Salaries and Wages Payable 12/31/16.

Yes, Matcha Creations has been profitable in November. It has a profit of NT\$255 which is more than one half of the revenue recognized in November.

- (a) Items that may result in adjusting entries for prepayments are:**
- 1. Other current assets (per statement of financial position).**
  - 2. Property, plant and equipment (per statement of financial position).**
  - 3. Intangible assets (per statement of financial position)—amortization is similar to depreciation (explained later in Chapter 9).**
- (b) Accrual adjusting entries were probably made for accounts payable, salary and bonus payable, accrued profit sharing, finance (interest) expense, and income tax payable.**

- (b) The international financial reporting standards pertaining to the income statement that were not recognized by Alicia were the revenue recognition principle and the expense recognition principle. The revenue recognition principle states that revenue is recognized in the accounting period in which the performance obligation is satisfied. The £14,000 for summer rentals is a prepayment for services to be performed in a later period. As a result, the performance obligation is not satisfied and, therefore, should not be reported in income for the quarter ended March 31. The expense recognition principle dictates that efforts (expenses) be matched with accomplishments (revenues) whenever it is reasonable and practicable to do so. This means that the expenses should include amounts incurred in March but not paid until April. The difference in expenses was £8,035 (£47,585 – £39,550). The overstatement of revenues (£14,000) plus the understatement of expenses (£8,035) equals the difference in reported income of £22,035 (£48,450 – £26,415).

**Dear Ms. Danon:**

**Upon reviewing the accounts of your company at the end of the year, I discovered that adjusting entries were not made.**

**Adjusting entries are made at the end of the accounting period to ensure that the revenue recognition and expense recognition principles required under international financial reporting standards are followed. The use of adjusting entries makes it possible to report on the statement of financial position the appropriate assets, liabilities, and equity at the statement date and to report on the income statement the proper net income (or loss) for the year.**

**Adjusting entries are needed because the trial balance may not contain an up-to-date and complete record of transactions and events for the following reasons:**

- 1. Some events are not journalized daily because it is not efficient to do so. Examples are the use of supplies and the earning of wages by employees.**
- 2. The expiration of some costs is not journalized during the accounting period because these costs expire with the passage of time rather than as a result of recurring daily transactions. Examples of such costs are building and equipment depreciation, rent, and insurance.**
- 3. Some expenses, such as the cost of utility service and property taxes, may be unrecorded because the bills for the costs have not been received.**

**There are four types of adjusting entries:**

- 1. Prepaid expenses—expenses paid in cash and recorded as assets before they are used or consumed.**
- 2. Unearned revenues—revenues received in cash and recorded as liabilities before they are earned.**

### **BYP 3-4 (Continued)**

- 3. Accrued revenues—revenues earned but not yet received in cash or recorded.**
- 4. Accrued expenses—expenses incurred but not yet paid in cash or recorded.**

**I will be happy to answer any questions you may have on adjusting entries.**

**Signature**

**(a) The stakeholders in this situation are:**

- ▶ **Diane Leno, controller.**
- ▶ **The president of Watkin Company Ltd.**
- ▶ **Watkin Company Ltd. shareholders.**

**(b) 1. It is unethical for the president to place pressure on Diane to misstate net income by requesting her to prepare incorrect adjusting entries.**

- 2. It is customary for adjusting entries to be dated as of the statement of financial position date although the entries are prepared at a later date. Diane did nothing unethical by dating the adjusting entries December 31.**

**(c) Diane can accrue revenues and defer expenses through the preparation of adjusting entries and be ethical so long as the entries reflect economic reality. Intentionally misrepresenting the company's financial condition and its results of operations is unethical (it is also illegal).**

## **GAAP EXERCISES**

### **GAAP 3-1**

**IFRS might choose to revalue land and buildings at fair value because it provides more relevant information. GAAP, on the other hand, requires land and buildings be valued at cost because it is more verifiable and therefore provides information that is representationally faithful.**

### **GAAP 3-2**

**No. GAAP classifies revenues as the economic benefit that arises from an entity's normal operating activities and gains as the benefits associated with activities outside the normal sales of goods and services.**

**GAAP also classifies expenses as those costs associated with an entity's normal operations and losses as those costs associated with activities outside the normal sales of goods and services.**

## GAAP FINANCIAL REPORTING PROBLEM

### GAAP 3-3

- (a) Items that may result in adjusting entries for prepayments are:
1. Other current assets (per balance sheet).
  2. Property, plant and equipment, net (per balance sheet).
  3. Acquired intangible assets, net (per balance sheet)—amortization is similar to depreciation (explained later in Chapter 9).
- (b) Accrual adjusting entries were probably made for accounts payable accrued expenses, and income taxes payable.
